

Nature Markets and Paludiculture: Developing New Markets

The Wildlife Trust for
**Lancashire
Manchester &
North Merseyside**

Lettuce harvesting on Rindle Field

Gore House Farm typha trial

Rewetted agricultural peat field in Greater Manchester

The project is conducting a meta data analysis of existing learnings and research from Lancashire Wildlife Trust paludiculture and lowland peat restoration projects to create a practical farm toolkit which will support the sustainable management of lowland agricultural peat at a landscape scale.

The toolkit will encompass the development and accessing of green finance options from the variety of crop choice data and varied re-wetting techniques to create a mosaic of sustainable land management options.
